

– Brief description of partner institutions –

Institute of Logic and Computation, TU Wien, Vienna, Austria.

The institute conducts basic and applied research on logical and algorithmic methods for modeling, construction and analysis of computer systems from software to large information networks. The institute consists of seven research units. One of them is the unit for algorithms and complexity (the Algorithms and Complexity group), which we are singling out for the planned collaboration with two members of that group. The main interest of the group is the development and analysis of efficient algorithms for solving computationally difficult problems arising from practice. Among other units, we single out the unit for Databases and artificial intelligence (Databases and Artificial intelligence group), Knowledge-based systems, and others. The head of the institute is prof. Dr. Thomas Eiter. The location of the institute is at the address Favoritenstrasse 9, 1040, Vienna, Austria. Additional information about the institute can be found at:

Faculty of Natural Sciences and Mathematics, University of Banja Luka, Bosnia and Herzegovina

It is founded on 1996. The building of the faculty is situated on the address: Mladena Stojanovića 2, 78000 Banja Luka, RS, BiH. At the faculty, students are educated for one among 8 study programs, one of them is SP Mathematics and Informatics. The profiles for graduate mathematicians and informatics, graduate informatics, and professors of mathematics and informatics are formed there. The members of the project team are mostly from the Department of Computer and Information Sciences. Currently, this department has four professors and three assistants, who actively participate in the realization of teaching duties for several study courses. The head of the department is prof. Dr. Dragan Matić. The faculty cooperates with a dozen business entities, mostly of them are from the IT sector. The current acting dean is prof. Goran Trbić, Ph.D. Additional information about this institution can be found at the following links:
